Introduction

In business, and in our home lives, we all like to feel secure. People go to many lengths to gain security, whether that be internet/cyber security, a safe car, or CCTV. For businesses, security is as important as ever, with around 35,000 burglaries reported per month in the UK on average. Most businesses have expensive hardware on site, as well as important business and even customer data. Loss of any of this data could be extremely damaging to company reputation.

CCTV has traditionally been an expensive security option only available to businesses and private individuals with deeper pockets. It has also been tricky to implement, requiring a significant amount of on-site backup infrastructure in order to store all of the recordings. However, the introduction of the cloud has made CCTV cheaper and, in turn, more accessible.

All that you need is an Internet connection, an IP network camera and a subscription from entrustIT – You simply connect the cameras to your network and sign up with your chosen package/service. It's that simple.

Your business is secured and you can view footage wherever you go. You can also use the video recordings to prosecute should the worst happen. Some cameras even notify you when they detect motion outside of business hours, giving you a direct link to the live video feed which you can use to call the police if necessary. The peace of mind that comes with a CCTV solution has never been easier to attain.

Why choose Cloud CCTV for your business?

The Benefits

Cloud CCTV is the cheapest and simplest way to gain CCTV security in your business. To get started, simply purchase approved cameras and then sign up with a hosting package from *entrustIT*.

Once you've decided where you want to place your cameras, all that remains is to connect them to the internet. You are then able to view all of your camera feeds live in one place, wherever you are in the world. The internet login portal allows you to view all of your recorded snapshots, view live feeds directly from your cameras and to see if there are any problems with your cameras or if any are offline.

The cameras are constantly recording snapshots which are saved automatically in cloud storage and held for a customer-set duration (normally 7 days). You will receive email based notifications if a camera detects motion out of hours, or if a camera goes offline.

Because all of your data is stored in the cloud, there is no need for complex and expensive local storage and monitoring infrastructure and since you pay on a monthly subscription basis, there are very limited overhead costs.

Security

When all of your business cameras can be accessed over the internet in one portal, keeping that portal out of the hands of prying eyes is crucial.

The portal is accessed using unique user credentials and the data is stored securely in cloud servers.

At *entrustIT*, we are ISO27001 security certified. That is the internationally recognised standard of information security. Our CCTV partners, Evercam, also pride themselves on their stringent cyber security.

We will handle an initial survey, implementation and the ongoing support of your cloud CCTV system

Certified to globally recognised standards: **ISO 9001 & ISO 27001**

10+ years experience supplying Cloud CCTV to businesses

Why choose entrust/IT as your Cloud CCTV Partner?

entrust/IT are able to handle the complete installation of your Cloud CCTV service.

Once you have chosen your cameras, our engineers can install them for you on your premises.

Our deployment process is as follows:

- Site evaluation and system design to accommodate your specific needs
- Installation of cabling for power, network connections and other components
- Installation of IP camera hardware and software
- System configuration

Once the cameras are installed we also offer expert aftercare as standard to ensure that your camera infrastructure runs smoothly and continues providing results:

- Ongoing system maintenance
- Technical Support
- Seamless integration with your existing network

entrust/IT have nearly a dozen years' experience in providing cloud services and have implemented successful CCTV systems in countless numbers of our business clients.

Cloud CCTV makes the peace of mind of CCTV security more affordable.

Recordings are backed up and stored in the cloud and can be used to prosecute should the worst happen.

Secure and safe web portal and storage.

“From the top of entrust/IT to the bottom, both managers and staff understand the importance of being ‘always on’. This promise is taken very seriously, the business implications of downtime are understood and if there are ever any problems, entrust will throw everything at it.”

Darren Woolsgrove - Chief Operating Officer - Harvey Jones Kitchens

Conclusion

Security matters. With entrustIT there are no compromises.

With something as important as the security of your company premises, there can be no room for compromises. However, that doesn't mean you should have to spend over the odds either.

Cloud CCTV is the perfect option for businesses looking to protect their offices from intruders without wanting to break the bank. Cloud CCTV is easy to setup and manage, and removes the need for complex and expensive on-site infrastructure to store recordings.

At entrustIT, we have been providing cloud solutions for nearly a dozen years and have experience providing cloud CCTV to many businesses in various industry sectors. To ensure you get the safest, most reliable service, we are ISO 27001 and ISO 9001 security and quality certified, the internationally recognised industry standards.
